

Transfer to **Android Device** Directly from the **e-GO! Library** Flash Drive Using the **Micro USB End**

This tutorial explains how to use the **micro USB end** to transfer the content of the **e-GO! Library** flash drive directly to your Android device.

Important: Your Android device must have a Micro USB port for this method of transfer to work. If it does not, consult our **to Android using USB Cable** tutorials (Windows 7, 8 or Mac).

Note: There are many devices running Android, and there are many versions of Android itself. The following tutorial is a general guide. Your actual experience and results may vary depending on the device model and the Android version being used.

Important: Be sure your device has the **Google Play Books** app installed. If it does not, navigate to the Google Play Store from the device itself and download Play Books (free). If you already have **Play Books**, you can skip this step.

Step 1. First, insert the **e-GO! Library** Micro USB end into your device's Micro USB port.

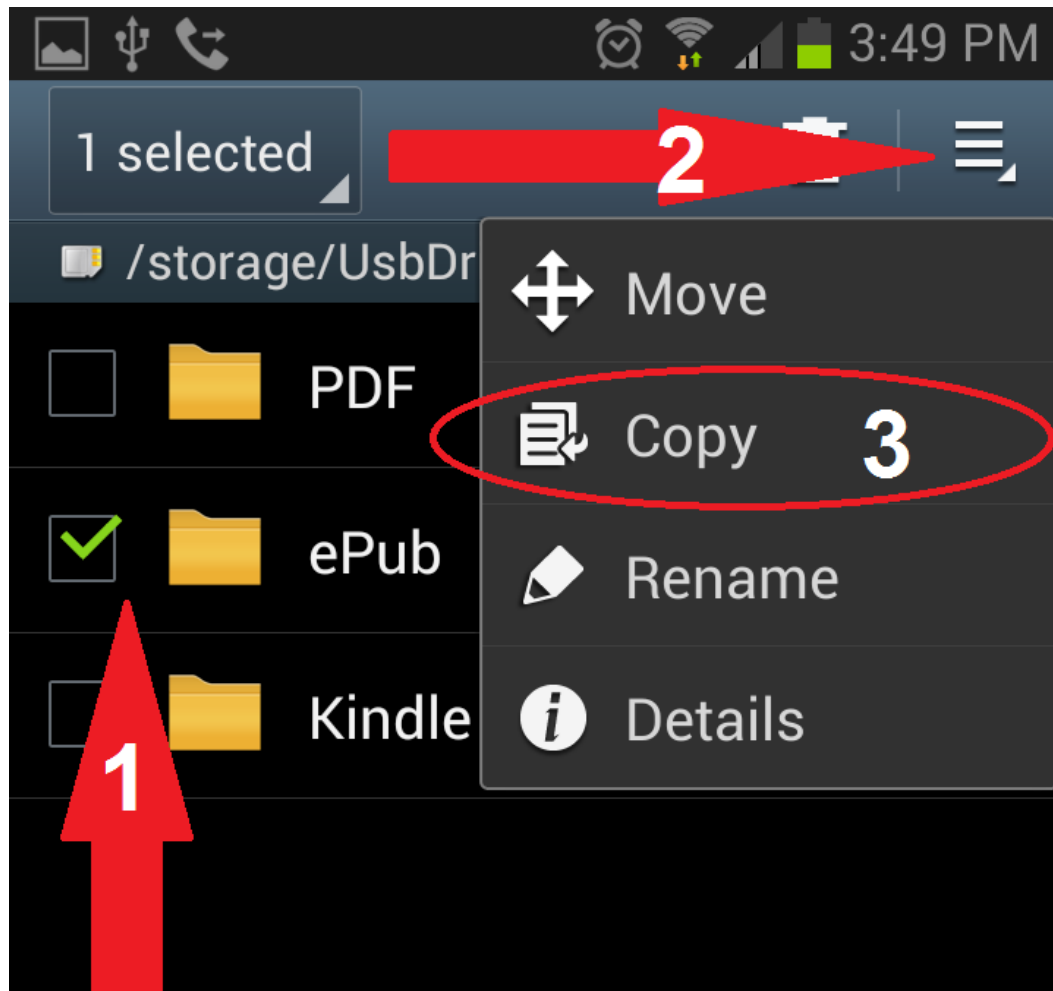

Step 2. From your device, navigate to where files and folders are kept. Most (but not all) devices have an icon labeled **My Files**. If so, click on this icon.

Step 3. Select the **All Files** option from the list; then the **UsbDrive** option; and then click on the **e-GO! Library** folder.

Step 4. Check the box next to the **ePUB** folder option; then hit the **Menu** icon and select **Copy**.

Step 5. Your device should have backtracked a step and taken you to storage location options. Select **sdCard** (or another folder on your device where you want to save the **e-GO! Library** contents); and then select the **Paste Here** option. These actions will copy all the eBooks from **the e-GO! Library** flash drive in the ePub format to your device's memory. You will be able to read the books without having the **e-GO! Library** connected.

Step 6. After all files are copied, select the **ePub** folder from the list presented.

Step 7. From the ePub folder you can browse selections starting with the main folders: Classics, Fiction, and Non-Fiction. Click on one of those three folders and then on a category that interests you from within that folder. For example, click **Classics** and then **Drama**.

Step 8. Here you will see all the books listed in that category. Click on a title that interests you. Following the example of Classics > Drama from above, you might click on "A Bit O' Love.epub."

Step 9. The title you selected should then open in the **Play Books** app. *Note:* It might take time for the book to load. While loading, the book can be found under the **Uploads** portion of the Play Books app.

Enjoy!
